

# One Year Later: No End In Sight For Supply Chain Crisis

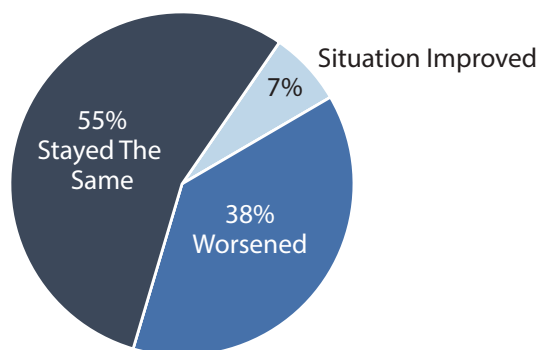

After one year of surveying companies in the medical supply chain, HIDA has found only slight reductions in the length of shipping delays and the volume of delayed medical containers. These persistent delays remain far above pre-COVID levels.

	December 2021	March 2022	June 2022	October 2022
Medical Containers Delayed	8,000 - 12,000 Containers	9,000 - 14,000 Containers	7,000 - 10,000 Containers	7,000 - 10,000 Containers
Average Delay	37 Days	27 Days	27 Days	25 Days

## Stakeholders Predict Persistent Delays For 2023

Over 90% of survey respondents reported the situation has stayed the same or worsened over the last three months.

## Shippers Shift Cargo To East Coast Ports

West Coast port delays have accelerated a shift to East Coast ports to service medical containers.

### Share Of Medical Containers By Port
